

Functions and Order of Evaluation in C++17 Solutions

Order of Evaluation in C++17

- C++17 made changes that affected the order of evaluation
- Briefly describe how these changes affect function arguments
 - Function arguments can still be evaluated in any order, but can no longer interleave

Conclusion

- Is it a good idea to write code like this?

```
i = ++i + 1;
```

```
func(i++, i);
```

- **No! This kind of code is confusing and error-prone**
