

Merging Associative Containers Exercises

Merging Associative Containers

- Given these two maps

```
map<string, int> old_scores = { {"Graham"s, 66}, {"Maybelline", 86} };
```

```
map<string, int> new_scores = { {"Graham", 78}, {"Grace", 66}, {"Hareesh", 77} };
```

- Write a program which merges the elements from `old_scores` into `new_scores`
 - The `new_scores` map should contain values for Graham, Grace, Maybelline and Hareesh
- Implement your solution
 - Using C++14 features only
 - Using C++17 features
