Converting Numbers to Strings Exercises

Round-trip Guarantee

- What is meant by the "round-trip guarantee" when converting between strings and numbers?

to_chars()

- Write a simple program which uses std::to_chars() to convert a number stored as an int to the same number stored in a character array

to_chars() Return Type

- Write a simple program which uses std::to_chars() to convert a number stored as a double to the same number stored in a character array

- Make sure your program can handle conversion errors

- Check your program works correctly when converting
  - A normal double value
  - A long double value which is too large to fit in the array
